## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. **Claims 1-5, 6-10, 11-13 (claim 31) and 32-34**, drawn to an admission control procedure for allocating spreading codes based on power where users are ranked first based on S/N and where the codes only one code at a time is allocated, classified in class 370, subclass 342.
  - II. **Claims 14-27, (claim 31) and 35-38**, drawn to optimizing power by classifying users into groups, classified in class 370, subclass 335.

The inventions are distinct, each from the other because of the following reasons:

2. **Inventions I and II** are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions either disclose admitting users to the network based on the power of spreading codes or based on the bit rate and power of a group. In particular, **claims 1-5, 6-10, and 11-13** are drawn to admission control for assigning users and **claims 14-19, 20-25 and 26** recite optimizing power by grouping users based on data rates and power (i.e., there is no admission control of users nor is there admission control of users based on power using codes). Specifically, invention I relates to figure 1 and invention II relates to figure 2 where figure 2 is completely different (and not related) from figure 1. Finally, **claim 31** is a generic claim where dependent **claims 32-34** fall under claims 1-5, 6-10 and 11-13; and dependent **claims 35-38** fall under claims 14-19, 20-25 and 26.
